

## **Site Guidance: Cleaning and Disinfecting for Novel Coronavirus**

The purpose of this guideline is to eliminate or minimize employee and visitor exposure to novel coronavirus (SARS-CoV-2) present on surfaces and equipment by using effective cleaning and disinfection practices in order to prevent coronavirus disease (COVID-19).

This guideline is recommended practice for all Weyerhaeuser operations, and it will be updated by the company's crisis management team as needed and re-communicated through the safety networks.

### **This document contains information on:**

- A. Definitions: Cleaning & Disinfecting
- B. Hazard Communication and Chemical Management
- C. Personal Protective Equipment (PPE)
- D. Procedure: Cleaning and Disinfecting Surfaces
- E. Cleaning Products

### **A. Definitions**

- **Cleaning** refers to the removal of germs, dirt, and impurities from surfaces. Cleaning does not kill germs, but by removing them, it lowers their numbers and the risk of spreading infection.
- **Disinfecting** refers to using chemicals to kill germs on surfaces. This process does not necessarily clean dirty surfaces or remove germs, but by killing germs on a surface *after* cleaning, it can further lower the risk of spreading infection.

### **B. Hazard Communication and Chemical Management**

- For use of cleaning and disinfecting products with volumes in excess of consumer (household) quantities, be certain to follow your site's Hazard Communication program and chemical management protocols.
- This includes using a documented chemical-approval process and having a current Safety Data Sheet (SDS) in the 3E database for each hazardous chemical product.
- Provide required Hazard Communication training to potentially exposed employees and adhere to container labeling requirements and safe chemical handling procedures.
- Be aware that high-percentage alcohol solutions are flammable. Avoid introducing unnecessary fire or other chemical-exposure risks. Consider substituting with equally effective and lower-risk alternative cleaning and disinfecting products.
- Ensure that the use of cleaning and disinfecting chemicals will not damage equipment and electronics.
- Whenever possible, avoid chemicals that require additional preparation such as dilution and mixing in the workplace before use.
- Follow a traditional "hierarchy of controls" approach for risk mitigation (i.e., substitution or elimination followed by engineering controls, administrative controls and PPE). Elimination of touch

points (e.g. no sharing of pens, clipboards, etc.) and avoiding other hand contacts will greatly reduce the need for ongoing cleaning.

### **C. Personal Protective Equipment (PPE)**

- Follow your site’s PPE program regarding proper selection and use of PPE and how to protect your employees from chemical exposure and infectious agents.
- Minimum-recommended PPE for cleaning and/or disinfecting surfaces potentially contaminated with coronavirus includes safety glasses and protective gloves (nitrile or other non-allergenic, liquid-impervious material). Additional PPE such as face shields and aprons may also be needed if there is a splash potential.

### **D. Procedure: Cleaning & Disinfecting Surfaces**

**Surfaces with Known or Likely Coronavirus Contamination** (includes body fluids such as sputum and respiratory secretions and hand contact from a suspected or known COVID-19 infected person)

- Before cleaning or disinfection begins, perform a risk assessment to determine areas and surfaces to be cleaned. The risk assessment should include a careful reconstruction of personnel movement for known or suspected COVID-19 infected persons based on interviews, video camera footage, job and task locations and likely travel paths.
- As part of the risk assessment, assess the cleaning area hazards and risk to personnel involved in the cleaning. Ensure others in the area are informed and if necessary, cordon off areas to be cleaned.
- All areas and contact surfaces with likely contamination from an infected person should be cleaned and disinfected. This includes fixed surfaces as listed above as well as non-fixed surfaces such as moveable controls, clipboards, etc. Surfaces only need to be cleaned first if they are dirty. All surfaces in the general area do not require cleaning unless there is specific suspicion of contamination.
- When disinfecting or cleaning, go from “outside-in” meaning wipe towards the area of highest suspected contamination to avoid spreading germs from areas of higher contamination to cleaner areas. When using wipes, use straight passes if possible and avoid a circular scrubbing motion that can spread germs to previously wiped areas. Read the label and follow instructions including whether the material is to be left on the surface wet after use until air dry (e.g. Clorox wipes).
- Whenever available and feasible, a professional cleaning service under contract should be used to clean and disinfect areas with likely coronavirus contamination. Check the types of procedures and cleaners to be used in advance to ensure they meet the criteria in this guideline.
- If possible and feasible, allow surfaces with likely “wet” coronavirus contamination to dry for several hours prior to cleaning and disinfecting. Access to such an area would need to be controlled.
- Personnel can return to areas after cleaning provided the areas have been checked for cleanliness and there are no residual, strong odors or wet surfaces present.

**Surfaces Where Coronavirus Contamination is Unknown** (Preventative Cleaning)

- Every shift (twice daily, minimum), clean and disinfect common areas and high-touch surfaces such as counters, frequently used handrails and door handles, walkie talkies, hand-held scanners and cell phones, operator booths, machine centers and consoles.
- If employees share a workspace or equipment/vehicles with others, disinfect surfaces that are likely to be touched by others before the next employee starts to work (e.g., computer keyboards and mice, telephone keypads and handsets, remotes, controls of vehicles or equipment, steering wheels, operator stations, booths

**These policies were developed for use only at Weyerhaeuser facilities and are not intended to be advice or guidance to be used elsewhere.**

and controls). Sanitizing surface wipes (see available surface wipe products list in this document) should be used in accordance with manufacturer's instructions.

- Each operator workstation should be supplied with ample cleaning products to be used for cleaning and disinfecting the work areas each shift, or more often if/as operator rotations occur.
- Dirty surfaces should be cleaned using a detergent or soap and water prior to disinfection. Be careful not to get water into electronic parts/components.
- For disinfection, use products effective on coronavirus (see Sect. 7) or alcohol solutions with at least 70% isopropyl alcohol. Employees are urged to also clean personal cell phones.
- Wear protective gloves (nitrile or other non-allergenic, liquid-impervious material) when cleaning and disinfecting surfaces. Disposable gloves should be discarded after each cleaning. Follow this procedure for removing gloves:
  - Grasp the outside of one glove at the wrist. Do not touch your bare skin.
  - Peel the glove away from your body, pulling it inside out.
  - Hold the glove you just removed in your gloved hand.
  - Peel off the second glove by putting your fingers inside the glove at the top of your wrist.
  - Turn the second glove inside out while pulling it away from your body, leaving the first glove inside the second.
  - Dispose of the gloves safely. Do not reuse the gloves.
  - Immediately after removing gloves, wash your hands with soap and water for at least 20 seconds, including fingertips and thumbs.
- Gloves of heavier, longer-lasting material may also be used. After use and while still wearing, the outside of these gloves may be washed in warm, soapy water and the gloves re-used. This could become important if glove supplies become limited. If gloves must be shared, the user should wear liner gloves.
- Wash hands immediately after gloves are removed. Wash with soap and water for at least 20 seconds, including fingertips and thumbs.
- For soft (porous) surfaces such as carpeted floor, rugs, and drapes, remove visible contamination if present and clean with appropriate cleaners indicated for use on these surfaces. After cleaning:
  - Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely. Consider using professional/commercial laundry services when available.
  - Use [products that meet the EPA's criteria for use against SARS-CoV-2, the cause of COVID-19](#), that are suitable for porous surfaces.
